Hi, Becky!

FYI an update on VI smapling

We recently found out that the HeadStart in Ana Maria Cabo Rojo has not moved from the building we sampled in March 2012. Last week, the local HeadStart Program administrators informed us that they found a place to relocate the kids (not that we ask for relocation). We are planning to collect VI samples at 3 the following HeadStarts: Ana Maria and 2 'new' headstarts.

Jeff may be able to collect the samples for us by mid-March, so we can expect analytical data by April.

Angela

Jeff says that he can do it. We may need access to the HeadStarts on Saturday and Sunday, if need to. Sampling dates will depend on how fast ERT can finished sampling in San German.

As discussed, the plan is to collect samples at the new HeadStart (HS) and at the Santa Rita HS (in the same neighborhood). I called the local HS Administrator and she said that they will not be able to moved the Ana Maria HS by mid-March. All of the remodeling quotes from local contractors state that they can not complete the job in a month, which means that they will stay in Ana Maria HS for a while... with no moving date. I called Arlene and this is how we think it should go:

Collect 4 samples in Ana Maria HS. Sample two sub-slabs ports with high PCE detections and 2 indoor air samples for a total of 4 samples.

Collect 4 samples (2 sub-slabs and 1 indoor air and 1 outdoor air sample) in Santa Rita HS. Santa Rita HS has only 1 classroom with 3034 sq ft (the size of 2 of the Ana Maria classrooms)

Collect 6 samples (3 sub slab, 2 indoor air and 1 outdoor air sample) at the new location Rebeka Colberg Stadium.

Please let me know if you agree or have other ideas.

thanks
